Overview of

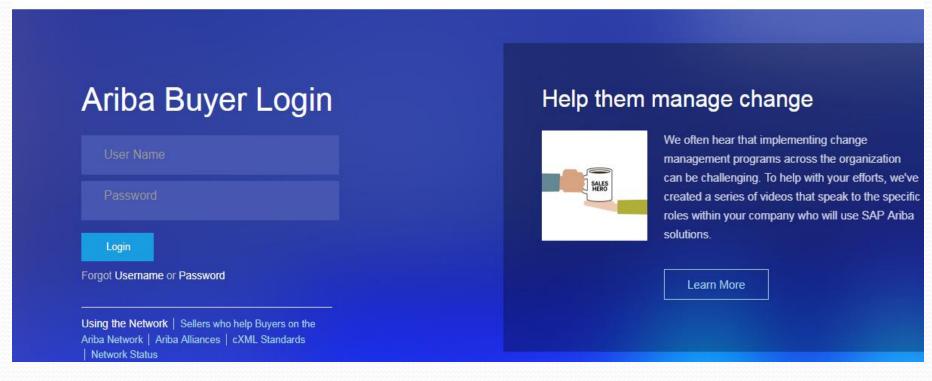

By Ravindra Shatole

What is Ariba?

- *Ariba is an American IT service company.
- Ariba, founded in 1996, became SAP Ariba in 2016.
- The whole idea of Ariba establishment was to enable companies to facilitate and improve the procurement process by using the internet.
- Ariba was acquired by German software maker SAP SE for \$4.3 billion in 2012 after taking the advise of biggest invenstment banks JPMorgan Chase and Deutsche Bank AG
- SAP Ariba provides cloud-based procurement, spend management and supply chain services that enable suppliers and buyers to connect and do business globally

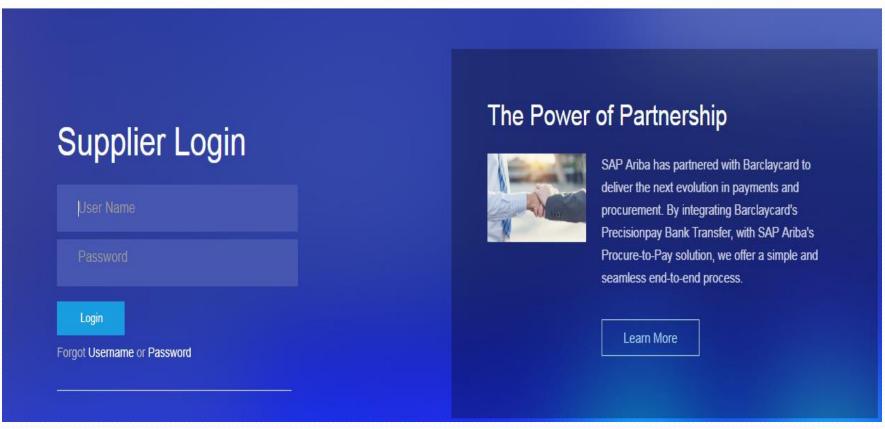

- SAP has stopped selling SRM from Year 2017 and now they will sell Ariba instead.
- *As Ariba is based on Cloud so only thing you will be getting from SAP Ariba is the URL along with the user id and password and you don't need any server to be installed at the client place for this software to work. You just need a browser to log into the Ariba system.
- In Ariba, there are two types of users mainly, The first one is Buyer (Purchaser) and second one is Supplier.
- There will be separate URL for both Buyer and supplier Buyer URL is generally known by "Ariba spend management" Link and Supplier URL is known by "Ariba Network".
- Latest on premise Ariba version is 9r2 and on cloud it is 15s.

Ariba Network

The size and scale of the world's largest business network allows buyers and sellers to quickly realize value

SAP-Ariba Integrations

SAP and Ariba can talk to each other using various methods. The buyer administrator can enable the integration of data.

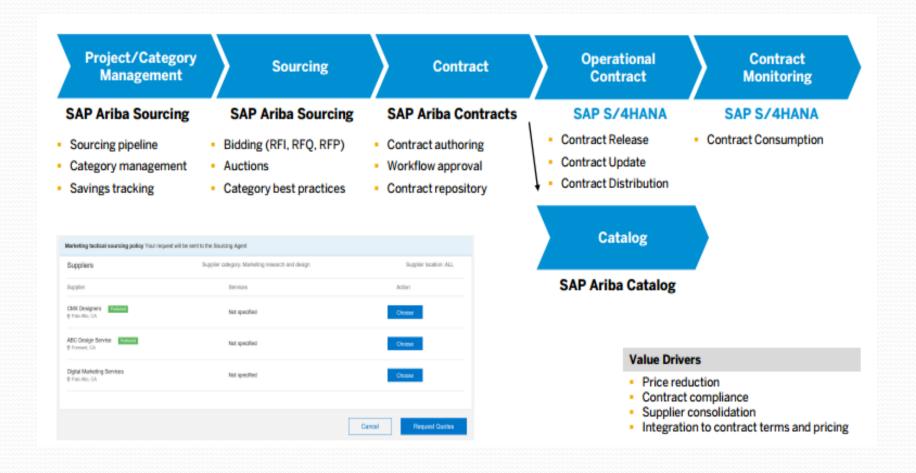

It can be integrated through the following methods:

- Pile-based
- Web-Services
- Direct point-to-point integration
- Mediated integration (SAP PI/ITK, SAP HCI (Hana cloud integration)
- Integration plug-in (ECC <-> AN)

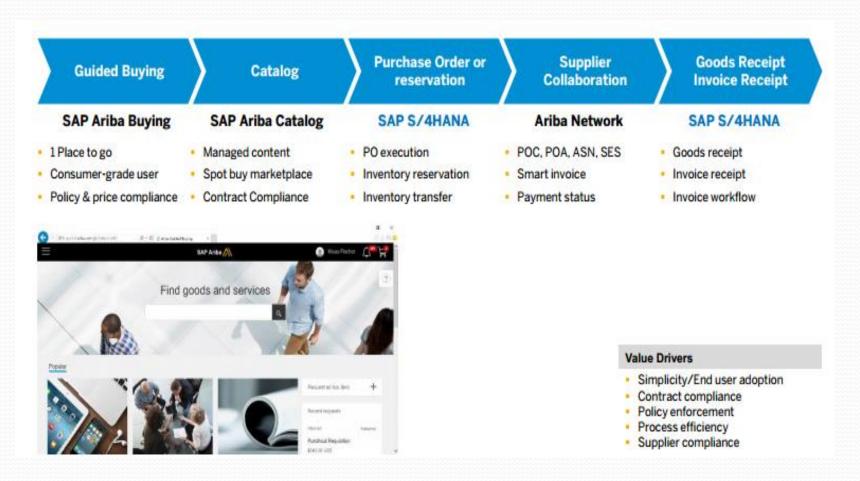

Following are the features of SAP Ariba procurement solution integration

- The administrators can export master data from SAP ERP to Ariba seamlessly.
- The transactional data can be updated bi-directionally or in real time.
- Ariba integration toolkit A Java-based tool that Ariba provides to upload master data or download transactional data.
- Ariba integration toolkit reads the CSV files in SAP ERP zips them, sends them as MIME messages using the HTTP post – to the Ariba procurement solution.

Strategic Sourcing

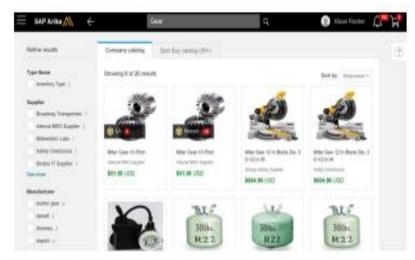

Procurement of Indirect and Services

Project Driven procurement

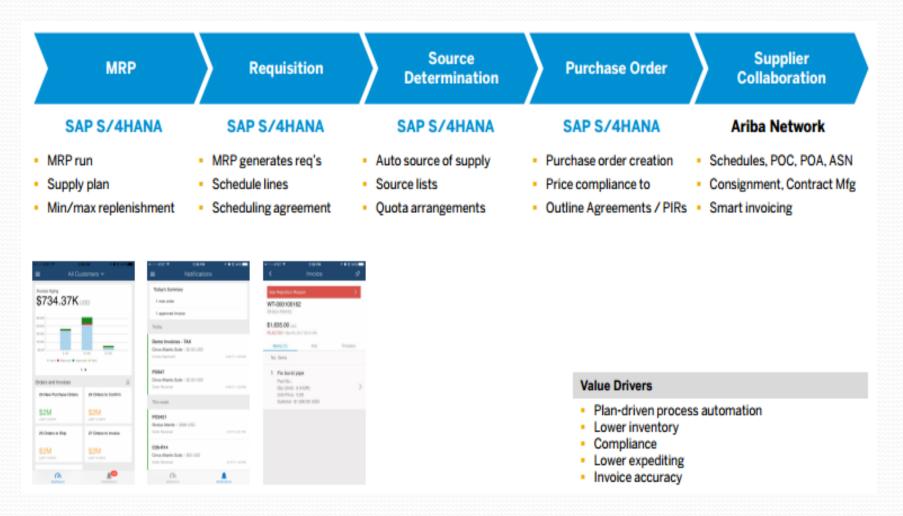

Value Drivers

- Increased asset parts ordering and uptime
- Simplicity for maintenance operations
- Contract compliance
- Lower inventory
- Process efficiency
- Supplier compliance

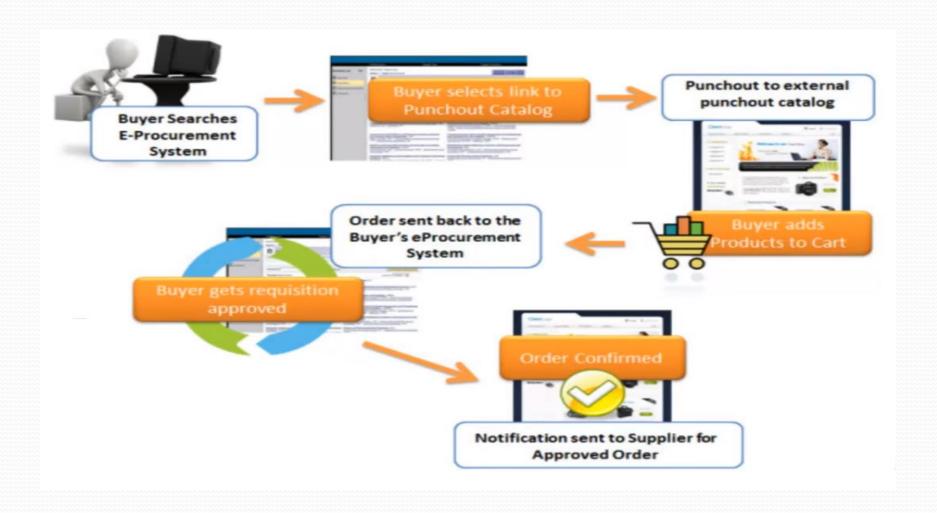

Plan Driven Procurement

SAP ARIBA CATALOG

- This solution offers extensive possibilities for loading electronic catalogs, their validations and approvals. All standard catalog formats are supported, including BMECat 1.2, CIF 3.0 and Excel.
- Catalog contains items available from the suppliers with whom your company has negotiated purchasing relationship.
- Catalog types used in Ariba are Local catalog and Punchout catalog.
- Local catalog are created in sap Ariba and directly searchable. You don't need to go on supplier site to search items.
- A PunchOut catalog is a remote catalog hosted by the supplier.

Purchasing by Punchout catalog

- □Ariba Spot Buy Catalog solution makes easy for buyer to find and buy nosourced goods with competitive price and delivery options.
- ☐ SAP Ariba Spot Buy Catalog quickly and easily guides users to the goods they need across common business categories such as MRO, facilities, IT and accessories, electrical and test equipment, and office supplies.
- ☐ AP Ariba Spot Buy Catalog can be easily configured to meet your corporate buying policies. Use it to quickly select which suppliers to include, limit user access, control specific commodities, and establish price thresholds. The result is the perfect balance of user convenience and buying controls.
- □ It's estimated that around 40% of company's indirect spend is from spot buy.

QUICKLY FIND AND BUY APPROVED ITEMS

NO CONTRACTS to negotiate

NO CATALOGS to create

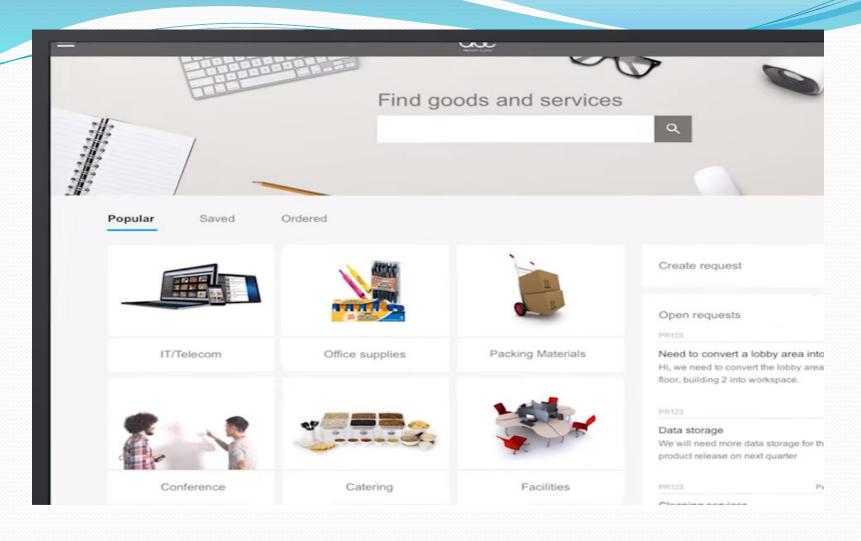

NO SUPPLIERS to enable

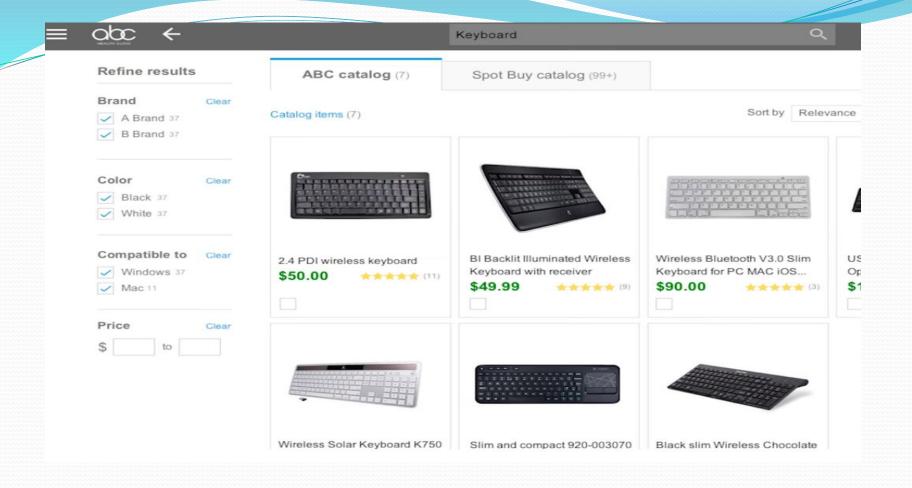

Ariba Guided Buying

Guided buying is a built-in capability available at no additional cost to customers, using the SAP Ariba Buying and SAP Ariba Buying and Invoicing solutions. It provides a smart, easy, and intuitive user interface for employees to create any type of procurement request.

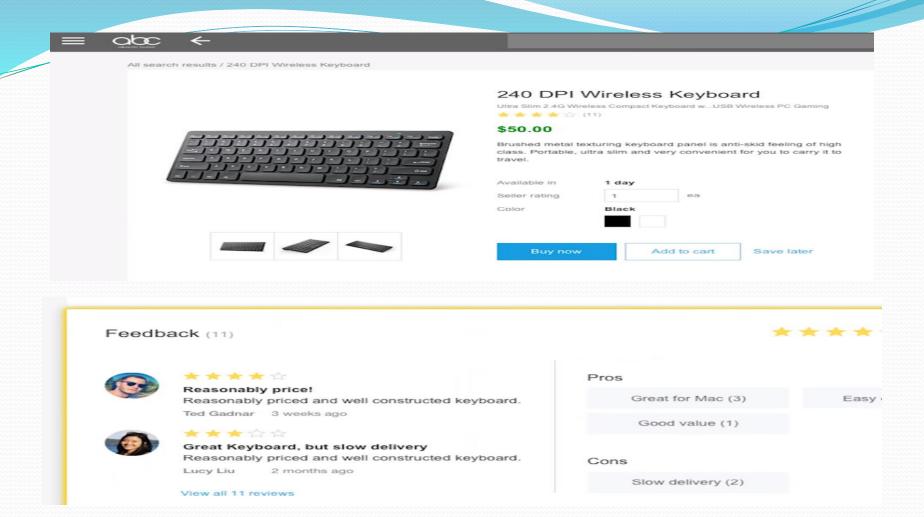

Let's talk about few examples to understand the Guided Buying concept in details.

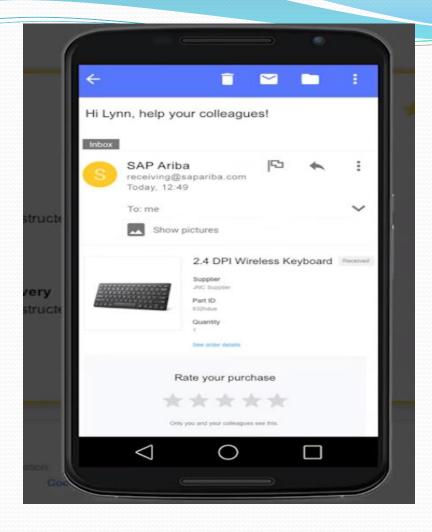

Example 1-If user want to buy keyboard then he will go to guided buying screen and enter keyboard

Keyboard catalog will be opened to choose as per his requirement and he will select accordingly.

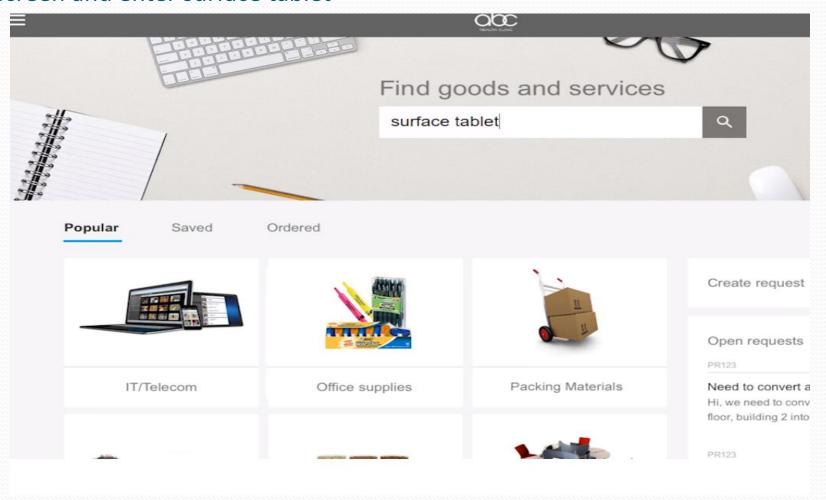

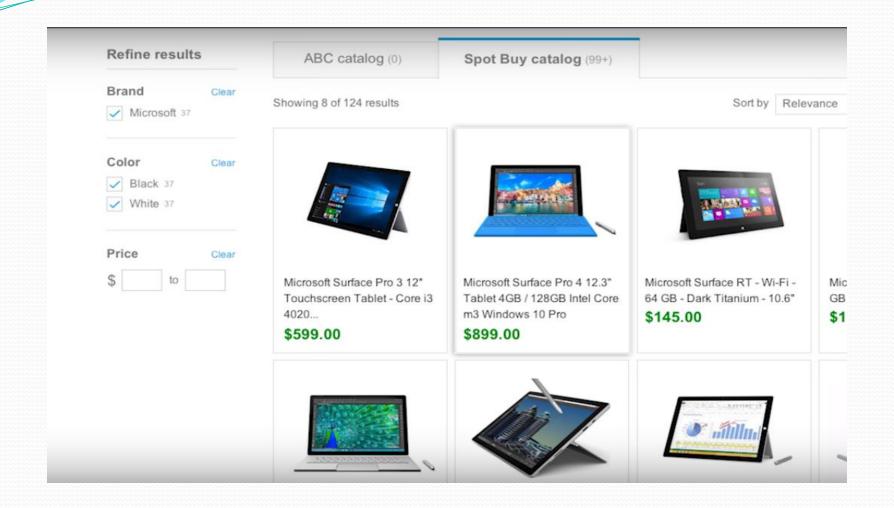

User will be guided by the feedback from Colleagues around him that have already purchased keyboard and let him know which one is the best

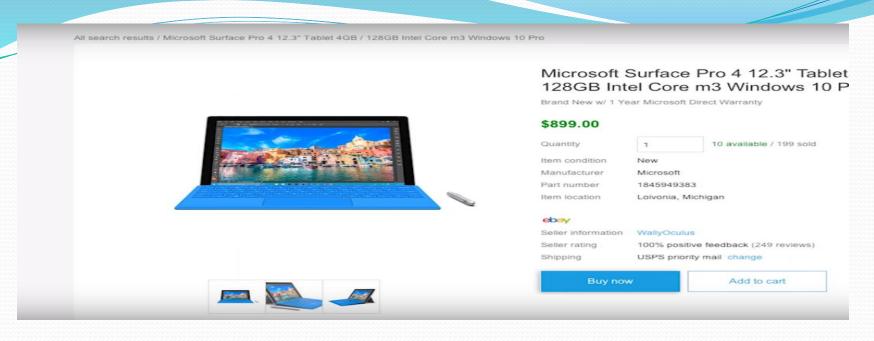

So Once the user purchase, The system will remind him to rate the purchase.

Example 2- If user want to buy surface tablet then he will go to guided buying screen and enter surface tablet

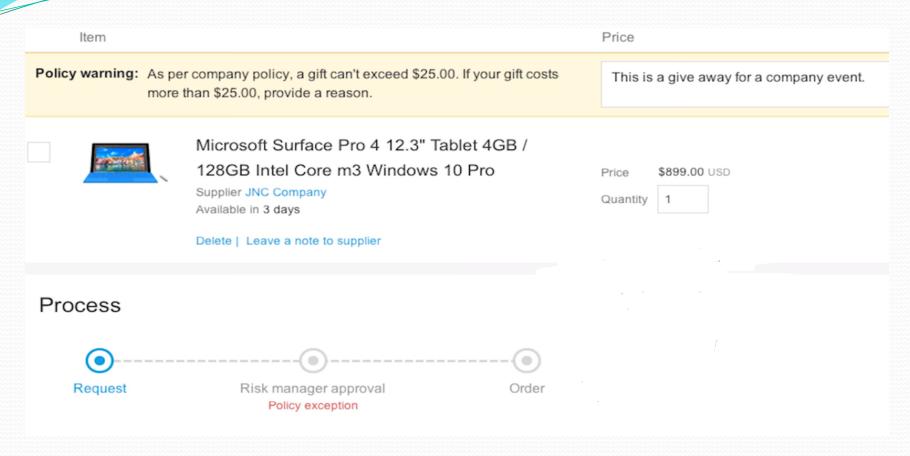

Keyboard catalog will be opened to choose as per his requirement and he will select accordingly.

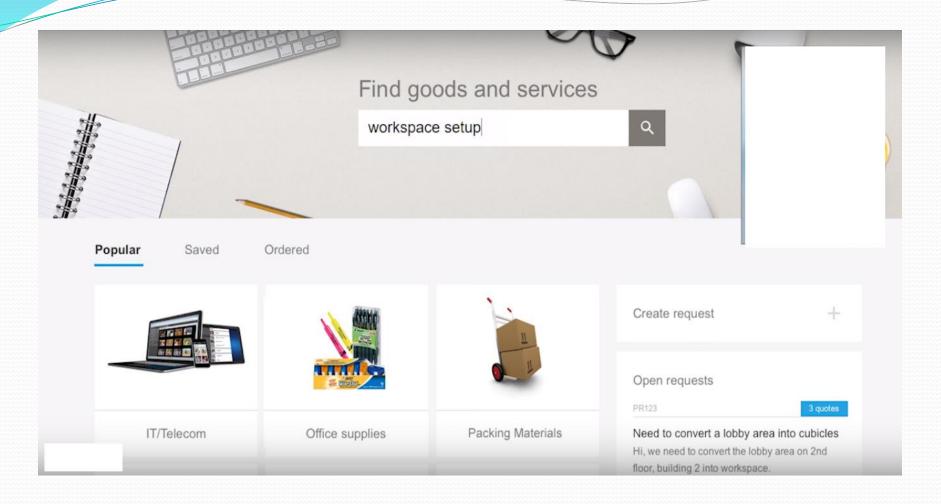

Checkout	
	Reason
	Select one
	Gift
	Business use
	Employee gift
- <u></u>	Others

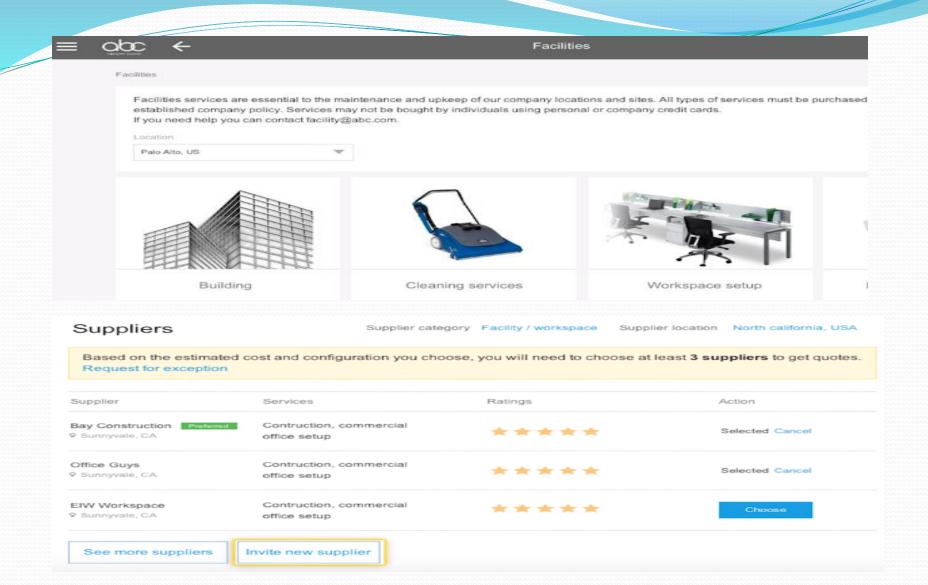

During checkout he need to give reason as per business policy why he is buying tablet

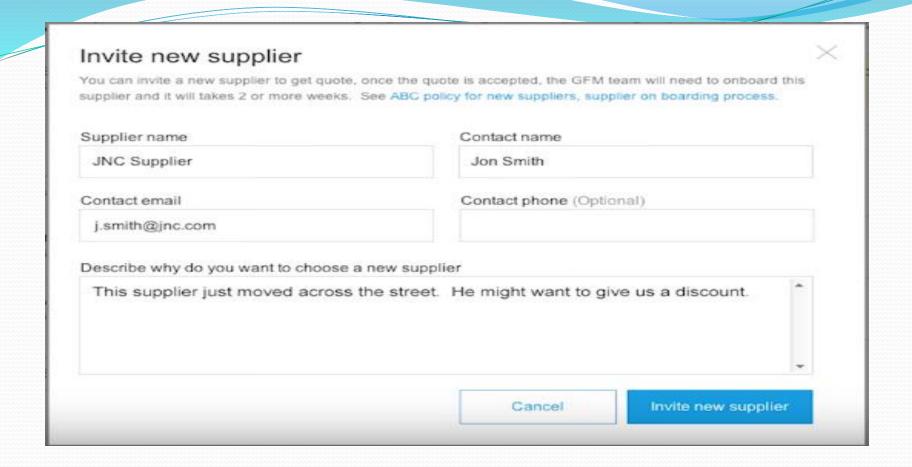

System will give policy warning message as per above and prevent from purchasing and need special approval from manager. Such type of policy restrictions can be customized in Ariba as per business requirement.

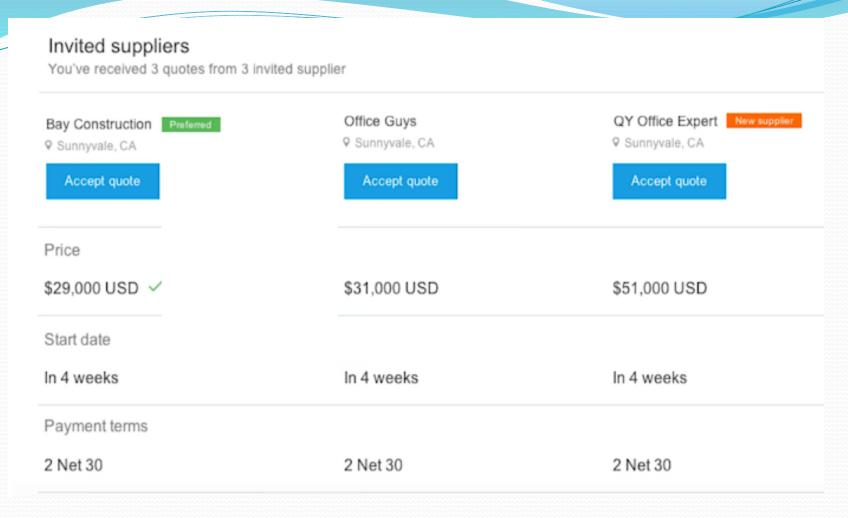

Example 3- Now user is requesting a quote for workspace setup

So as per policy user need to select at least three suppliers to get the quote

User has the flexibility to invite new suppliers as well apart from preferred suppliers.

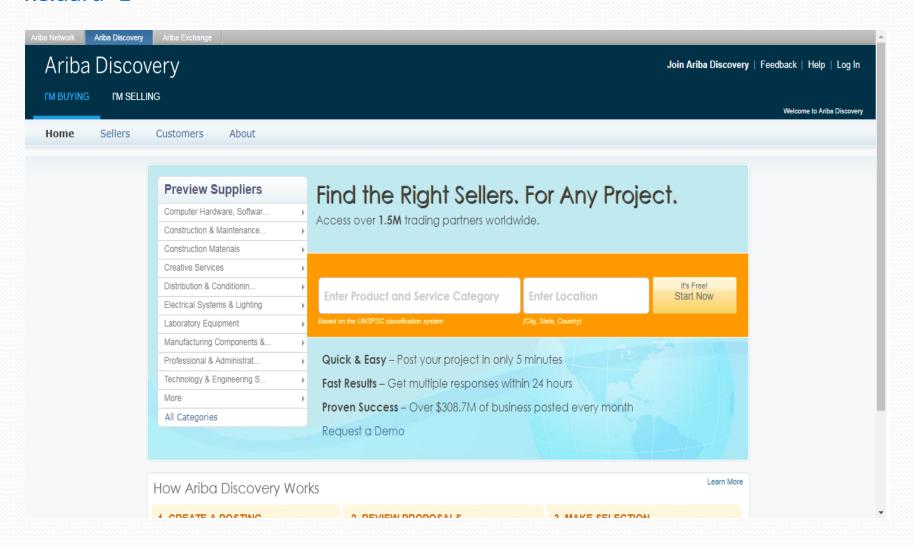

Once user receives quotes, he can then select the best offer and proceed with the request.

SAP Ariba Discovery

- SAP Ariba Discovery is your online business matching service, tapping into the largest B2B business network for access to 2.5+ million qualified suppliers.
- It gives buyer the access to worlds largest community
 of suppliers with greatly reducing the time required for
 identification and qualification which in turn reduces
 the cycle time.
